

EVO™

VIDEO STORAGE FOR CREATIVE WORKGROUPS

10Gb iSCSI SAN & NAS,
Multiple 4Gb Fibre Channel ports and
the Ability to Bridge Your Existing Storage...

ALL IN ONE BOX.

OFFERING:

- > File Level Access
- > Volume Level Access
- > 1Gb, 2Gb, 4Gb and 10Gb Host Connect
- > Up to 24TB Per System
- > Up to 8 Direct-connect FC Hosts
- > User-defined RAID 5, 10, or 0 per volume
- > SANmp Volume Management
- > Q:COMPLETE Support

Evo - the latest advance in complete shared storage solutions for video workgroups. Evo enables everyone in your workgroup to share projects, media and other large files using the most extensive connectivity options available in a single product - with 1Gb, 2Gb, 4Gb and 10Gb Host Connection Options.

Developed specifically for post production workgroups, Evo offers a huge advantage in terms of connectivity and upgradeability - since it **integrates a NAS and a SAN into one system, you get the benefits of both file-sharing and volume-locking.** By including Fibre Channel, iSCSI and NAS into a single product, Evo assures that creative workgroups will have the best tool for every aspect of a project.

A single Evo system offers up to 24 Terabytes of high-throughput storage and connectivity for up to 10 direct-connect Mac and PC clients via a combination of 4 Gb/s Fibre Channel and iSCSI over Gigabit Ethernet ports.

Evo is designed for flexibility and upgradeability. Start with a base model and add the specific storage or connectivity options to create the perfect system for your workgroup. Upgrade options include additional drives, additional 4 Gb/s Fibre Channel ports, or additional 1 Gb/s Ethernet ports. For the ultimate network performance, add a 10 Gb/s option for a 10X increase in network bandwidth for NAS and iSCSI.

Evo also includes features such as **advanced disk-provisioning** that enables drives to be arranged into storage pools, each capable of containing one or more volumes. Individual volumes can each be assigned a discrete RAID level, giving users the **flexibility to choose what matters most: performance, reliability, usable space, or a mix of all three.** For the most demanding applications, Evo offers the ability to dedicate any pool's bandwidth to a specific task such as ingesting video. The complete solution is extremely versatile - it will even allow your existing Fibre Channel storage to be extended over Ethernet. By providing superior flexibility, connectivity, and expandability, an Evo system fits your workflow instead of forcing you adapt to it. Evo is the ideal storage solution for state-of-the art video post-production workgroups.

Did you know?

A single Evo can take the place of a storage array, a file server, a network switch and a Fibre Channel to iSCSI bridge. **Less equipment equals less energy use and less net carbon emissions.**

Responsive technical support plans that offer coverage around the clock.
