Key features

Direct recording into available space

You do not have to find a place to start as you do with tapes. There is also no fear of recording over previous recordings.

Send text data such as title

You can use the RS-232C/USB cables to send text information to use as program titles.

Auto-protect function

Recorded images can be protected automatically.

Repeat play, play list editing

Just decide a length of time to repeat, then specify the end point during play to play a section repeatedly. You can also edit together the images you need into a play list.

Play and edit on a PC

Use PC application to edit and create backup discs.

Small and light, power compatible between 100V and 240V

Compact so you have freedom in placement.

Systems Applications

1. Image Filing System (RS-232C/USB-controlled)

[1] Control of LQ-MD800 from business-use AV equipment

AV equipment with RS-232C control function can be used to control operations such as recording and playback, and playback modes like slow motion and fast forward.

[2] Direct recording onto free space on the disc, and prevention of accidental overwriting of previous data

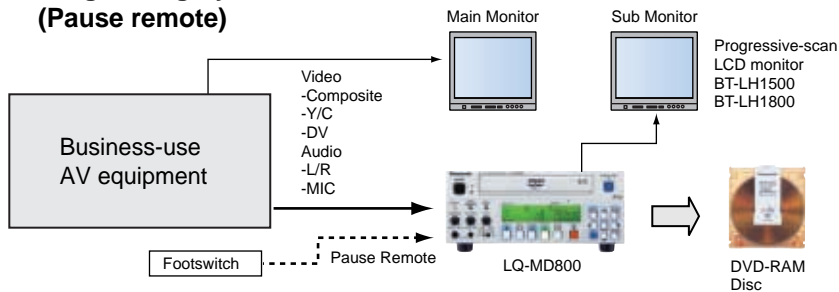

Unlike videotape, the use of a disc eliminates the need to search for a blank space before you start recording. Also, you won't lose previously recorded data by accidentally recording over it.

[3] Recording of ID number and other information

A name and ID number can be recorded together with the title of the images via RS-232C/USB. A list can then be displayed for easy searching of recorded images.

[4] Audio input channels 1 and 2 for recording.

2. Image Filing System (Pause remote)

[1] Remote record pause

Recordings can be started and paused by using a footswitch or other device.

[2] Recording of ID number and other information

A name and ID number can be recorded together with the title of the images via RS-232C/USB. A list can then be displayed for easy searching of recorded images.

[3] Progressive-scan playback (NTSC only)

DVD ensures high-quality image playback.

3. Seminar Room/Viewing Station System

[1] Image search (List search based on recording date/time or ID)

Pressing the button displays a list of recorded images together with their recording date/time, thus allowing a quick and easy selection of the images to view. By registering a name for each image title, searching becomes even more convenient.

[2] Progressive-scan playback (NTSC only)

DVD ensures high-quality image playback.

[3] Playlist playback

A playlist can be produced for the programmed playback of selected images. Repeat loops are easily selected.

4. Editing Room System

[1] Playback and editing of images using a PC

Recorded images can be edited and a backup disc can be produced by using DVD editing/authoring software.

Using a PC for Control and DVD Editing

Controlling operation with a PC (Control software must be customized.)
